

Super Erecta® Slanted Shelving

Slanted Shelving Units

The Metro Super Erecta Slanted Shelf Racks are a proven storage solution designed to improve organization, stock visibility, and efficiency in demanding healthcare environments. Built from durable, high-quality steel with a chrome or epoxy finish, these racks provide long-lasting reliability while maintaining compliance with hospital hygiene standards.

Each unit features angled shelving that positions sutures or sterile packs for clear visibility and quick access, reducing picking time and supporting effective stock rotation. The slanted design ensures that supplies are always front-facing and easy to retrieve, which is particularly valuable in theatres, surgical wards, and sterile services departments where speed and accuracy are essential.

The racks are mounted on heavy-duty casters, allowing effortless mobility between storage areas and treatment spaces. Despite their robust construction, the system remains adaptable, with adjustable shelves that can be reconfigured to meet changing clinical demands.

Code	Width	Depth	Height	Weight
DC16EC	57.6cm	63.2cm	199cm	100kg
DC36EC	107.9cm	63.2cm	199cm	136kg
DC56EC	57.6cm	63.2cm	199cm	100kg
